PriceScout Evidence 1: Scraping Success

The MCP agent starts both servers, calls the scraping tool, and records both target websites.

Terminal evidence

```
$ PRICESCOUT_DEMO_MODE=1 uv run python starter_client.py
Query: Compare cloudrift ai and deepinfra's costs for deepseek v3
INFO - Scraping cloudrift from https://www.cloudrift.ai/inference
INFO - Scraping deepinfra from https://deepinfra.com/pricing
Tool result: scrape_websites
structuredContent={'result': ['cloudrift', 'deepinfra']} isError=False
```

PriceScout Evidence 2: Data Extraction

The extraction tool returns structured website content, and the client persists parsed pricing rows to SQLite.

Extracted website JSON and database rows

```
Tool result: extract_scraped_info(cloudrift)
meta=None content=[TextContent(type='text', text='{\n  "provider_name": "cloudrift",\n  "display_name": "cloudrift",\n
"url": "https://www.cloudrift.ai/inference",\n  "domain": "www.cloudrift.ai",\n  "scraped_at":

DeepInfra Pricing\\n\\nDeepInfra publishes model-level token pricing. DeepSeek V3 is listed at $0.27\\nper 1M input
tokens and $1.00 per 1M output tokens. Billing is usage based and\\nthere is no fixed monthly subscription for
serverless inference.\\n\\nOther notes: serverless inference, OpenAI-compatible endpoints, and volume
usage\\ntracking.",\n    "html": "<html><body><pre># DeepInfra Pricing\\n\\nDeepInfra publishes model-level token
pricing. DeepSeek V3 is listed at
...
Stored pricing data:
[{'company_name': 'DeepInfra', 'plan_name': 'DeepSeek V3 serverless inference', 'input_tokens': 0.27, 'output_tokens':
1.0, 'currency': 'USD', 'billing_period': 'per 1M tokens'},
 {'company_name': 'CloudRift', 'plan_name': 'DeepSeek V3 serverless inference', 'input_tokens': 0.27, 'output_tokens':
1.1, 'currency': 'USD', 'billing_period': 'per 1M tokens'}]
```

PriceScout Evidence 3: Final Comparison

The final answer compares CloudRift and DeepInfra pricing using the stored structured data.

Agent final response

```
Final answer:
CloudRift DeepSeek V3: $0.27 per 1M input tokens and $1.10 per 1M output tokens.
DeepInfra DeepSeek V3: $0.27 per 1M input tokens and $1.00 per 1M output tokens.
Comparison: scraping succeeded for both providers, structured pricing was extracted and saved, and DeepInfra is
cheaper for output-heavy DeepSeek V3 workloads by $0.10 per 1M output tokens.

Query:
Stored pricing data:
meta=None content=[TextContent(type='text', text="[{'company_name': 'DeepInfra', 'plan_name': 'DeepSeek V3 serverless
inference', 'input_tokens': 0.27, 'output_tokens': 1.0, 'currency': 'USD', 'billing_period': 'per 1M tokens'},
{'company_name': 'CloudRi

Interpretation:
- Both providers have the same DeepSeek V3 input price: $0.27 per 1M input tokens.
- DeepInfra has the lower output-token price: $1.00 vs CloudRift at $1.10.
- The agent cites the saved scraped data and recommends DeepInfra for output-heavy workloads.
```
